## MOTomed viva2

### 1 Operation

#### Operating the MOTomed viva2

The MOTomed viva2 is simple to operate. With just a few large, palpable buttons on the operating panel, the user has easy access to the MOTomed functions: Whether the speed should be fast or slow, the resistance heavy or light, the movement forwards or backwards – everything is right at hand.

Large type and graphics on the display keep the user continually informed about the training and provide operating guidance.

On the opposite graphic, you can see some example screenshots from the MOTomed viva2.

**Important safety feature:** speed and motor power can be adjusted independent of each other.
